minima
objective, $h_\mu g_\mu + \beta\lambda$
receptor abundance, λ
Optimal coverage, C^*_μ
protection-to-cost ratio, $\frac{\sigma_\mu h_\mu g_\mu^{\max}}{\beta}$
microbe abundance, $\tilde{g}(\lambda^*)$
protection-to-cost ratio, $\frac{\sigma h g^{\max}}{\beta}$
sensitivity, $\|\frac{d\tilde{g}}{dC}(C^*)\|$
protection-to-cost ratio, $\frac{\sigma h g^{\max}}{\beta}$
